BS

Professional Summary

Software engineer with strong SQL, Python, and Power BI skills, delivering database optimization, automated reporting, and reliable analytics solutions. Focused on turning complex data problems into scalable, accurate workflows. Experienced in video production and visual storytelling, and open to technical and creative roles that blend engineering, data, and design.

Work History

DELL TECHNOLOGIES

Round Rock, TX • 2021 – Present

Software Engineer II

02/2025 – Present

Data Intelligence Team, Install Base 360 Data Products

- Design and optimize SingleStore databases and own end-to-end table creation, building an automated SQL validator that closes ingestion gaps and improves pipeline accuracy for downstream analytics and reporting.
- Engineer failure detection and a daily automated email report of LLM success/failure counts, and debug production issues using logs, monitoring tools, and root-cause analysis to speed up issue response.
- Build and deploy LLM solutions for the IB360 project, including an MCP server (developed in Zeus, then re-architected for DataRobot) and an automated wiki, writing unit tests to reduce defects and maintaining GitLab CI/CD pipelines to automate deployments.
- Produce videos showcasing team projects, roadmaps, and business impact for stakeholders and cross-functional teams, improving visibility and alignment on priorities.

Software Engineer I

02/2023 – 01/2025

Service Platform and Data Team

- Built Customer Contacts & Addresses analytics dashboard in Power BI, implementing backend data logic and tracking address accuracy issues, asset re-linking time, and counts of assets, customers, and business units; added resolution tracker, historical metrics, and weekly scorecard that streamlined stakeholders' reporting efforts.
- Developed the Asset Weekly Creation dashboard and the Services Platform & Data Scorecard using Power Query and DAX, replacing manual reporting with weekly views of asset creation, entitlements, order volume, and call and response time trends for the Services Platform, Data Engineering, and Billing & Aero teams.
- Managed weekly reporting on assets and entitlements, identifying and closing process gaps that decreased ServiceNow incident volume.
- Created videos for team presentations to effectively communicate project updates and results to stakeholders and leadership.

Undergraduate Software Engineering & IT Intern

06/2022 – 08/2022

Technology Transformation Services Cloud Enablement Team

- Designed and built automated messaging app with micro-frontends and webhook APIs, launched in Dell's UX marketplace to enhance user experience.
- Developed and exported Angular components as reusable structures for messaging application, promoting code efficiency and maintainability.

Dell Digital & IT Undergraduate Intern Remote

05/2021 – 08/2021

DataOps Platform Team

- Developed and deployed highly available, scalable applications for internal and external customers.
- Applied Human-Centered Design methods on the Data Science team to shape solutions around user and business goals.
- Supported cross-functional teams with research, documentation, and routine project coordination; prepared presentations, summaries, and status updates for internal stakeholders.
- Streamlined recurring workflows by organizing files, trackers, and deliverables, and recommended practical improvements for daily operations.

Skills

LANGUAGES & WEB

SQL Python JavaScript HTML and XML Angular

DATA & ANALYTICS

Power BI DAX Power Query Excel

Data analysis Dashboards & reporting

SingleStore Teradata GraphDB Stardog

Apache Spark/Hive Database management

Database software

ENGINEERING

API integration Webhooks Code debugging

Unit testing Root cause analysis Git proficiency

GitLab CI/CD Software lifecycle

Performance optimization ServiceNow

AI & AUTOMATION

LLM solutions MCP servers DataRobot

Workflow automation Failure detection

DESIGN & COMMUNICATION

Video production Visual storytelling

Stakeholder communication UI/UX design

Human Centered Design AutoCAD

Certifications

Python

Indian Institute of Hardware Technology • 10/03/2023

Education

New York University

Bachelor of Science: Computer Science, Minor in Mathematics

New York, NY • 05/2023

LEADERSHIP

- Alpha Kappa Alpha Sorority, Incorporated – First Vice President, Educational Advancement Foundation Chapter Lead, and Member
- National Society of Black Engineers – Internal Vice President, Programs Chair, Secretary, and Member

UNIVERSITY PROJECTS

- Reprint Bot – Prototyped a system to recycle plastic bottles into 3D-printing material; led UI/UX design and deployed the model to an iOS app.
- NYU Hyperloop – Evaluated materials against size and load constraints, ran structural-integrity calculations, and produced AutoCAD drafts.
